

Laramide Resources Ltd.

MANAGEMENT DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

For the Periods ended June 30, 2017 and 2016
As at August 14, 2017

This Management's Discussion and Analysis ("MD&A") provides a discussion and analysis of the financial condition and results of operations to a reader to assess material changes in the financial condition and results of operations as at and for the periods ended June 30, 2017 and 2016. The MD&A is intended to supplement the interim condensed consolidated financial statements and notes thereto ("Statements") of Laramide Resources Ltd. ("Laramide" or the "Company") as at and for the periods ended June 30, 2017 and 2016. You are encouraged to review the Statements in conjunction with this document.

All amounts included in the MD&A are in Canadian dollars, unless otherwise specified. This report is dated August 14, 2017, and the Company's filings, including its most recent Annual Information Form, can be reviewed on the SEDAR website at www.sedar.com.

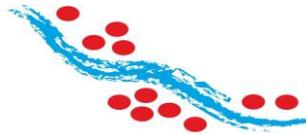

OVERVIEW

Laramide is a publicly listed company engaged in the exploration and development of high-quality uranium assets based in the United States and Australia. The Company is listed on the Toronto Stock Exchange ("TSX") and on the Australian Securities Exchange ("ASX") both under the symbol "LAM", with 114,859,216 shares issued and outstanding, as at the date of this MD&A. Laramide provides investors exposure through its portfolio of uranium projects chosen for their production potential, including the advanced Churchrock ISR Project in the United States, Westmoreland in Australia and two development-stage assets, La Sal and La Jara Mesa, in the United States. Within the portfolio are also joint ventures in Australia and strategic equity positions.

The Company also has investments in precious metals properties in Canada through its equity stake in Treasury Metals Inc. ("Treasury Metals"), which was spun-off from Laramide in August 2008. Please see page 24 of the MD&A for further details on Treasury Metals.

Management believes that the development of low-cost uranium properties is one of the more attractive opportunities in resource development globally, particularly over the long term. Uniquely positioned to capture a larger share of a growing worldwide energy market, nuclear power is currently an integral part of baseload electricity production in over 32 countries and has the additional benefit in an era of rising climate change concerns of producing electricity with zero carbon emissions.

Long-term growth prospects in nuclear power is today concentrated in a few large nations, particularly China which now has 37 operating reactors with a further 20 under construction. This strong growth profile has offset a reduction in several western countries, such as Germany, in the wake of the Fukushima event in 2011 which created new challenges for public acceptance of nuclear power at a time when renewables appeared to be a potential lower cost alternative. This debate continues and has now expanded to other important nuclear nations, such as France and South Korea, but the challenge of replacing nuclear today with non-fossil fueled sources of baseload electricity largely remains elusive. For this reason, management believes the medium to longer term outlook for uranium producers should be healthy once the current supply overhang is eliminated. This overhang was created in large part due to the essential overnight shutdown in 2011 of the Japanese nuclear fleet – a situation that is now reversing, albeit very slowly.

Laramide Resources Ltd.

With the return of five Japanese units to production, there are today more reactors (447) producing more electricity (392,335 MWe) than there were in March 2011 when the Fukushima incident occurred. Also, according to World Nuclear Performance Report 2016, today there are more nuclear reactors under construction and more reactors that came on line last year than at any time in the past 25 years. Construction times for new reactors has also improved, with reactors coming on line in 2015 having an average construction time of 73 months.

While the Company believes strongly that the long-term fundamentals have not materially changed and expects tightening supply and rising demand from expanding global nuclear power generation to bring about recovering uranium prices over the long-term, the current extreme weakness in the short-term spot market dictates a cautious approach to development activities in the meantime. The conservative approach was evident in the most recently completed quarter with the main activity being the initiation of the 43-101 technical report on the Company's Churchrock properties, a report that is now expected to be completed and delivered in the third quarter.

PROPERTIES AND INVESTMENTS

Australian Properties

Westmoreland, in Queensland, Australia, the Company's flagship project:

- located in northwest Queensland, near the Northern Territory border;
- in April 2016, the results of the updated PEA/Scoping Study were reported. The detailed results are presented later in this report under the section New Developments (which starts on Page 4);
- as part of the updated PEA/Scoping Study, the May 2009 Mineral Resource Estimate was reviewed to ensure compliance with JORC 2012 and is restated as the 2016 Mineral Resource and reports an Indicated Mineral Resource totaling 36.0 million pounds of uranium (U_3O_8) contained in 18.7 million tonnes at an average grade of 0.089% U_3O_8 , and an additional Inferred Mineral Resource totaling 15.9 million pounds of uranium (U_3O_8) contained in 9.0 million tonnes at an average grade of 0.083% U_3O_8
- Laramide's Westmoreland Project is one of the largest uranium deposits not controlled by a senior producer or utility;
- and, the Project is one of a small percentage of known deposits expected to have compelling economics at expected long-term uranium prices.

Three contiguous joint ventures in Northern Territory, Australia, adjacent to flagship Westmoreland Project:

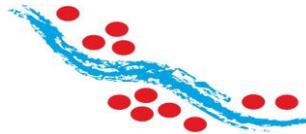

- the Verdant Minerals (previously Rum Jungle Resources) - Lagoon Creek Joint Venture
- the Gulf Manganese Joint Venture
- the Rio Tinto – Murphy Farm-In and Joint Venture

See section below entitled "Northern Territory Properties, Northern Territory, Australia".

U.S. Properties

HRI - Churchrock and Crownpoint, New Mexico

- On January 5, 2017, the Company announced it had closed a transaction with Uranium Resources Inc. ("URI") pursuant to which Laramide acquired 100% of an advanced stage portfolio of high-quality In Situ Recovery ("ISR") projects in New Mexico through the acquisition Hydro Resources Inc. (HRI), which is now a wholly owned subsidiary of Laramide. The properties are principally comprised of the Churchrock and Crownpoint projects, in addition to nearby assets;

Laramide Resources Ltd.

- HRI owns mineral interests, mining claims and other assets that comprise the Churchrock and Crownpoint mining projects and the recently consolidated Strathmore/Churchrock assets;
- HRI also holds a license from the United States Nuclear Regulatory Commission for production of uranium from Sections 8 and 17 of the Churchrock project, and the Crownpoint project;
- Also, the United States Nuclear Regulatory Commission has approved for the construction of a Central Processing Plant at the Crownpoint property. While the permit to build the facility has been granted, a mining study has not been filed to support the technical feasibility or economic viability of the Central Processing Plan;
- Historical estimates of uranium mineral resources have been completed on the Properties. Collectively, the Properties' historical mineral resources of uranium are considered "historical estimates" for purposes of Canadian securities legislation and NI 43-101 and are therefore "NI 43-101 compliant". However, they cannot be considered current mineral resources. There are four historical resource estimates from 2005 to 2012, summarized in a table later in this Management Discussion and Analysis.

La Sal, Utah

- United States Bureau of Land Management ("BLM") issued a positive Record of Decision approving the Exploration Plan of Operations in June 2012, and shortly thereafter, in October 2012, a permit approving the Notice of Intention to Commence Small Mine Activities was received from the Utah State Division of Oil, Gas and Mining. The issuance of these documents from the BLM and the State allow Laramide to commence underground exploration and development activities which, if positive, could ultimately lead towards commercial production;
- As a result of the BLM's finding of no significant impact, the preparation of an environmental impact statement will not be required;
- La Sal is located in close proximity to Energy Fuels' White Mesa Mill in Blanding, Utah. In January 2013, the Company entered into a toll milling agreement, whereby Energy Fuels' White Mesa Mill will process all material produced from Laramide's 100% owned and operated La Sal II Uranium Mine Project in Utah.

La Jara Mesa Project, New Mexico

- Located in the prolific Grants Mineral Belt, NM;
- Hosts 10.5 million pounds U_3O_8 and is currently undergoing permitting (see discussion below in the section entitled "Homestake Uranium Properties");
- On May 18, 2012, the U.S. Forest Service ("USFS") issued a Draft Environmental Impact Statement ("DEIS") for the La Jara Mesa uranium project. The DEIS represents a significant milestone in the mine permit process, which would allow underground development activities and mine production;
- There was a public review of the DEIS, including a 60-day comment period ended July 17, 2012; and
- Progress will continue with the National Environmental Policy Act ("NEPA") review process of La Jara Mesa, which will ultimately lead to the completion of the Final Environmental Impact Statement and Record of Decision ("ROD").

Laramide Resources Ltd.

Equity Holdings

- 8,700,000 shares of Khan Resources Inc. having a market value of \$435,000 on June 30, 2017 and at the date of this report; and
- 3,067,000 shares of Treasury Metals Inc. having a market value of \$1.84 million on June 30, 2017, and \$1.93 million at the date of this report. Most of these shares were retained in connection with the spin-off transaction and distribution by Return of Capital to Laramide shareholders.

All of the equity holdings are discussed in the “Investments” section, and the Treasury Metals spin-off is detailed in the MD&A for the third quarter of 2008. The Company operates through its wholly owned U.S. subsidiaries Laramide Resources (USA) Inc., Laramide La Sal, Inc., and its wholly owned Australian subsidiaries Lagoon Creek Resources Pty Ltd., Westmoreland Resources Pty Ltd., and Tackle Resources Pty Ltd. Its wholly owned Mexican subsidiary is inactive. The organization chart contained in the 2017 Annual Information Form depicts the intercorporate relationships.

NEW DEVELOPMENTS

Completion of Acquisition of Churchrock and Crownpoint Properties

On January 5, 2017, the Company announced that it had closed a transaction with Uranium Resources Inc. (“URI”) pursuant to which the Company acquired 100% of an advanced stage portfolio of high-quality In Situ Recovery (“ISR”) projects in New Mexico through the acquisition of Hydro Resources Inc. (HRI). The properties are principally comprised of the Churchrock and Crownpoint projects, in addition to nearby assets.

These projects have been previously burdened by significant net smelter royalties, specifically the sliding scale royalty, held by Laramide Resources of up to 25% of gross revenue covering certain areas of the properties as described in Note 9 (4) to the December 2015 Consolidated Financial Statements. Following the acquisition by Laramide a leading In Situ Recovery (“ISR”) division is created operating in a tier one jurisdiction with enhanced overall project economics and potential low operating costs.

Acquisition Highlights

- LAM through the acquisition of HRI owns mineral interests, mining claims and other assets that comprise the Churchrock and Crownpoint mining projects and the recently consolidated Strathmore/Churchrock assets;
- HRI also holds a license from the United States Nuclear Regulatory Commission for production of uranium from Sections 8 and 17 of the Churchrock project, and the Crownpoint project;
- Also, the United States Nuclear Regulatory Commission has approved for the construction of a Central Processing Plant at the Crownpoint property. While the permit to build this facility has been granted, a mining study has not been filed to support the technical feasibility or economic viability of the Central Processing Plant;
- Historical estimates and a Feasibility Study completed by HRI of uranium mineral resources have been completed on the Properties. Collectively, the Properties’ historical mineral resources of uranium are considered “historical estimates” for purposes of Canadian securities legislation and NI 43-101 and are therefore “NI 43-101 compliant”. However, they cannot be considered current mineral resources. There are four historical resource estimates from 2005 to 2012, summarized in a table later in this section;
- Historical estimates suggest the mineral resources may be amenable to ISR;

Laramide Resources Ltd.

- In the Feasibility Study on Churchrock's Section 8, prepared by Behre Dolbear & Company, the existing royalties, in particular Laramide's royalties, were highlighted as substantially impacting the project economics;
- Attractive acquisition costs for Laramide on an approximate USD\$0.21 per pound global basis;
- Laramide has expertise in New Mexico through its current ownership of the La Jara Mesa uranium project and the Company's Chief Operating Officer has strong ISR experience globally;
- Multiple proximal uranium properties provide the opportunity for further consolidation and toll-milling revenues;
- The properties are located in a mining district in a jurisdiction with excellent infrastructure; and
- URI will also be granted an option to purchase, through and including January 5, 2018, Laramide's interest in a subsidiary that owns the La Sal project in Utah for USD\$4.0 million, effected by a reduction in principal of the Note from USD\$7.25 million to USD\$3.25 million with respective adjustments to the principal and interest payment schedule.

Further details are outlined on pages 19 through 23 of this report.

Debt Restructuring

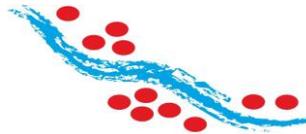

On October 7, 2016, the Company and its lenders announced they have agreed to extend the maturity date of the previously issued USD\$3.7 million term loan to July 1, 2018. Full details of the extension are included in the Debt Financing section of this report and in Note 12 to the June 30, 2017 interim condensed financial statements.

Debt Financing

On December 31, 2015, the Company arranged with Extract Advisors LLC ("Extract") a USD\$3.7 (CAD\$4.9 million) term loan which was used to repay a loan facility with Anglo Pacific PLC on maturity. Royalty options associated with the loan facility also expired at that time. The terms of the loan were partially amended in December 2016. This is described in Note 12 to the December 31, 2016 Consolidated Financial Statements.

Conditions of the Extract term loan are as follows:

- USD\$3.7 million (CAD\$5 million) with an original maturity of February 28, 2017, extended to July 1, 2018;
- The Company repaid USD\$748,839 (CAD\$1 million) of the USD\$3.7 million (CAD\$5 million) as part of the amendment terms;
- Interest rate of the greater of 12-month LIBOR or 2%, plus 7.5% per annum paid monthly. The annual effective interest rate is 29% which, besides the agreed interest rate, includes the effect of the cash transaction costs and the Black-Scholes value of the warrants issued and extended in favour of Extract;
- Repayments at any time with a 3% make-whole penalty;
- Arrangement fee of 4% of the facility amount. In addition, a 2% extension fee and CAD\$125,000 closing fees was paid as a partial consideration for the amending agreement;

Laramide Resources Ltd.

- The issuance of 2.5 million common shares of Laramide subject to a 4-month hold period;
- The issuance of 1.25 million warrants of Laramide issued at an exercise price of \$0.1911 and a second series of 1.25 million warrants of Laramide issued at an exercise price of \$0.3871. Both series of warrants expire on December 31, 2018 (extended to December 31, 2020 as per a condition of the amendment). Laramide can accelerate the exercise of the first series of warrants if the common shares trade at or above \$1.00 for ten consecutive days. These warrants were subsequently exercised in 2017;
- The issuance of 1.2 million warrants of Laramide at an exercise price of \$0.35 expiring on December 16, 2021, as partial consideration of the amending agreement for the extension of the maturity date;
- The obligation to maintain investments with a market value of no less than \$2 million in its securities account maintained with Bank of Montreal ("Equity Account"). Any sale or disposition of the securities must have the prior written consent of Extract. In the event the market value of the Equity Account falls below \$2 million for ten consecutive business days, the Company shall deposit additional cash or securities in this Equity Account to rectify the deficiency within five business days; and
- The payment to Extract of 50 per cent of the cash proceeds of the dispositions, to be applied against the outstanding loan balance, if the aggregate balance in the Equity Account is between \$2 million and \$2.75 million at the time of the disposition. Such requirement is not applicable if the aggregate balance in the Equity Account is greater than \$2.75 million at the time of the sale.

The term loan also provides Extract a production fee of USD\$0.50 (CAD\$0.7) per pound of U₃O₈ produced from any of the projects owned by Laramide. The production fee may be repurchased at any time by Laramide for a lump sum payment equal to:

- \$0.3 million if the term loan is repaid in full on or before 6 months from the closing date;
- \$0.5 million if the term loan is repaid after 6 months on or before 14 months from the closing date
- \$2 million after the repayment of the term loan.

Other Recent Milestones

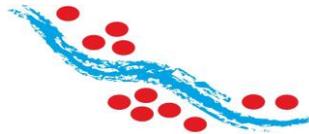

On January 5, 2017, the Company closed a private placement issuing 14,913,500 units at a price of \$0.30 per unit, for aggregate gross proceeds of \$4,474,050 of which \$2,205,450 was received in advance and held by the trustee at December 31, 2016. Each unit consists of one common share in the capital of the Company and one share purchase warrant which entitles the holder to purchase one additional common share at \$0.45 for a period of 60 months.

PLANS FOR 2017

Laramide has decided to proceed cautiously until the uranium market improves and accordingly will focus on those areas which are considered to add the most value. The Company will re-evaluate its development plan timetable in conjunction with the changing uranium environment.

In 2017, the Company will be working towards:

- Updating to a 43-101 compliant mineral resource of the historical non-compliant estimates on the Churchrock and Crownpoint properties. On March 29, 2017, the Company announced the engagement of SRK Consulting Inc. of Denver, CO, to prepare an independent 43-101 technical

Laramide Resources Ltd.

report on the mineral resource for the Company's Churchrock and Mancos properties located in New Mexico;

- Completion of a PEA on the Churchrock Project;
- Design development strategy followed by implementation for the Churchrock and Crownpoint properties;
- Advancement of the Westmoreland project, and, more specifically:
 - continue with exploration work on the mineral systems approach
 - continue environmental baseline data acquisition
 - funding dependent, prepare the inputs for the Initial Advice Statement, which is the first step towards permitting
- Complete the exploration work and spending commitments on the Northern Territory tenements under the Rio Tinto-Murphy Farm-in and Joint Agreement; and,
- Continue the required legal work towards the permitting of the La Jara Mesa Project.

QUEENSLAND POLITICAL DEVELOPMENTS

Uranium mining has bipartisan support at a federal level in Australia; however, portions of the permitting process is dealt with by the State of Queensland government level, where a uranium ban had been in place since production ended at Mary Kathleen mine in 1982. The ban still allowed exploration activities in Queensland. When the LNP in 2012 returned to power they reversed this longstanding policy, and following a lengthy action plan detailing an implementation strategy and outline of the uranium mining policy framework, the State deemed in August 2014 that new applications for mine permits could be submitted.

On January 31, 2015, the Queensland State election was held and shortly after the election a minority ALP was able to form government. The Queensland ALP remains opposed to granting uranium mining permits and the ban was reinstated.

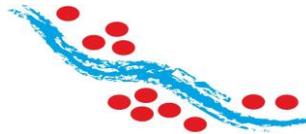

As a country, Australia is the third largest producer of uranium globally, due to the Northern Territory and South Australia having created uranium industries.

RESULTS OF OPERATIONS – EXPLORATION AND DEVELOPMENT

WESTMORELAND PROPERTY, Queensland, Australia

The Westmoreland Project (the "Project") in Queensland, Australia is Laramide's flagship uranium project, acquired in 2005. Laramide owns 100% of Westmoreland (subject to a 1% Net Smelter Royalty "NSR" to Royal Gold Inc., with cumulative payments capped at AUD\$10 million indexed to inflation) and has advanced the project through a series of drilling campaigns, updated resource estimates, environmental studies and metallurgical studies.

The project is located in northwest Queensland near the Northern Territory border. The Westmoreland Project was discovered by Mount Isa Mines and has had a long history of exploration. Most recently, the project was held by Rio Tinto Exploration from 1990 to 2000 during which time it completed a pre-feasibility study.

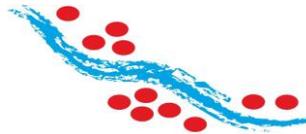

Laramide Resources Ltd.

Laramide subsequently completed an extensive program of airborne geophysics, drilling and environmental work. The Company completed two separate resource calculations with Mining Associates Limited of Brisbane, Australia and has recently completed a mining scoping study with Lycopodium Minerals Pty Ltd of Brisbane, Australia.

The chronology of Laramide's activity at Westmoreland has been summarized in prior MD&As, with activity over the most recent years summarized, as follows:

- December 2007 to July 2008: First phase of Westmoreland drilling by Laramide was completed, with 121 holes over 11,248 metres. Drilling results were consistent with predecessor data, or better than expected. Assay results from 31 drill holes at Westmoreland were reported in October 2008 including Hole WDD08-075 at Redtree which returned 48 metres at 0.11% U_3O_8 and WDD08-084 which intersected 31 metres at 0.08% U_3O_8 .
- September/October 2008: Further drilling of 31 holes for 928 metres was completed. The majority of holes reported within the Jack Lens of the Redtree deposit intersected mineralization within 10 metres of surface. The Redtree deposit is the Westmoreland area containing most of the resource. Final assay results were reported in December 2008. Highlights included Hole WDD08-096, containing 10 metres at 0.66% U_3O_8 .
- An environmental monitoring program collecting baseline data for flora, fauna and ground and water sampling was commenced in 2008 and continued throughout the wet and dry seasons for a number of years.
- April 2009: An updated resource estimate was announced, with Mining Associates reporting an Indicated Mineral Resource totaling 36.0 million pounds of uranium (U_3O_8) contained in 18.7 million tonnes at an average grade of 0.089% U_3O_8 , and an additional Inferred Mineral Resource totaling 15.9 million pounds of uranium (U_3O_8) contained in 9.0 million tonnes at an average grade of 0.083% U_3O_8 on the property.
- November/December 2009: Laramide drilled 31 holes for 1,871m testing exploration targets along the three-kilometre structural corridor between the Huarabagoo and Junnagunna deposits.
- August 2010: A total of 19 holes (1,378 metres) were drilled at Westmoreland between the Huarabagoo (7 holes) and Sue-Outcamp areas (12 holes). Assay results for these holes were announced in November 2010. Metallurgical work also commenced, with the engagement of Rolly Nice, a consulting metallurgical engineer with extensive and diversified expertise in uranium mineral processing worldwide (Elliot Lake, Jabiluka, Ranger). The metallurgical test work is described in more detail below.
- July 2011: Comprehensive metallurgical test work carried out by the Australian Nuclear Science and Technology Organisation was completed. High recoveries of 97% were achieved using a conventional uranium processing route. The report also identified definitive process route options to provide engineering design data sufficient to support a pre-feasibility level of study.
- August to November 2012: A diamond drilling program comprising 30 holes for 4,118 metres was undertaken at Westmoreland. The program focused on the highly prospective structural corridor that connects the Huarabagoo and Junnagunna deposits. Please visit Laramide's website, www.laramide.com, for further diagrams and cross sections.
- April 2016: Completed and reported the results of an updated PEA study and the PEA's details of which are detailed on the next page.

Laramide Resources Ltd.

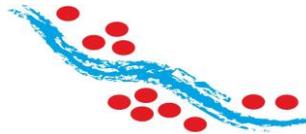

Exploration Costs - Westmoreland	Additions Q2		Balance June 30	
	2017	2016	2017	2016
Drilling, field support and assays	-	-	6,246,640	6,246,640
Camp, field and land costs	-	-	3,555,904	3,555,904
Licencing and tenure costs	-	-	1,735,330	1,735,330
General and administrative	168,500	122,012	9,748,097	9,370,428
Access Negotiation	4,585	-	4,277,338	4,207,641
Project engineering studies	-	-	738,080	738,080
Field consultants and salaries	48,282	45,898	6,630,406	6,444,408
Environmental study	-	-	3,058,767	3,058,767
Metallurgical consultants	-	-	272,328	272,328
Resource Calculation Consultants	-	-	200,293	200,293
Geophysics and surveyors	660	-	240,440	230,937
Depreciation	245	562	2,155,736	2,154,279
Acquisitions of properties and data	-	-	17,057,344	17,057,344
R&D Refund	-	-	(865,533)	(865,533)
Translation adjustment	(1,032,167)	(1,635,648)	3,195,176	1,494,680
Total	(809,895)	(1,467,176)	58,246,346	55,901,525

Note: Exploration costs are incurred in Australian dollars and converted to Canadian dollars at historical rates for purposes of the above table. Accounting convention requires that they be reported for financial statement purposes at the current year end exchange rate. The Translation adjustment represents the difference in the two rates.

During the year 2015, the key Westmoreland tenements were renewed for a period of 5 years and the Company relinquished the non-core EPM15061 tenement with \$484,732 of capitalized expenditures, which were charged to the statement of comprehensive income.

Work is being undertaken to develop a mineral systems approach to regional exploration which will utilise the enormous wealth of Westmoreland data available. This model incorporates a detailed review of influencing factors on mineralised deposition and has been used successfully by Canadian explorers in the Athabaskan Uranium Province. The mineral systems approach brings together the various aspects of structural architecture, sedimentology, fluid sources and pathways from regional to prospect scale, in-turn significantly improving drill location targeting and the productivity and efficiency of future drilling programs.

In addition, this work could lead to the identification of new satellite deposits. As part of this systems approach, during the 2015 year, a significant amount of drill core from previous drill programs was scanned using a short wavelength infrared spectrometer. Further core that was not previously assayed, as it did not have a radiometric signature, was selected for assay to understand the composition various distances from the mineralization. This data is currently being assessed by a consultant who specializes in this field.

Laramide Resources Ltd.

Updated PEA/Scoping Study - April 2016

In April 2016, Laramide announced the results from the updated Preliminary Economic Assessment (“PEA”)/Scoping Study for the Westmoreland Uranium Project, located in the North West Queensland Mineral Province, Australia. The independent study was completed by Lycopodium Minerals Pty Ltd. (± 35% level of accuracy). A copy of the PEA/Scoping Study has been filed and available for viewing and download at www.sedar.com and the Company’s website www.laramide.com.

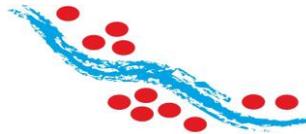

Key Highlights of the PEA/Scoping Study (at USD\$65/lb U₃O₈ Life of Mine price)

- Initial capital expenditures (“CAPEX”) of USD\$268M plus USD\$49M contingency are estimated to construct the mine and a 2M tonne per annum (tpa) mill with a nameplate capacity of 4Mlb U₃O₈ per annum;
- Total sustaining capital of USD\$58M over the Life of Mine (“LOM”);
- Cash operating cost to average USD\$21.00/lb U₃O₈ for the first five years of operation and USD\$23.20/lb U₃O₈ LOM;
- Net Present Value (“NPV”) at a 10% discount rate of USD\$598M pre-tax and USD\$400M post tax;
- Internal Rate of Return (“IRR”) of 45.4% pre-tax and 35.8% post tax with a capital payback estimated at 2.5 years post-tax;
- Low 2.3:1 strip ratio for the first 5 years of operation and 4:1 LOM. Simple, open cut mining operation;
- Mine scheduling allows best practice in-pit tailings storage to be employed without the requirement for a temporary tailings storage facility; and
- Opportunities have been identified to further reduce operating cost through reagent recycling. Further test work is required to confirm this assumption before incorporating it into the process model.

PEA/Scoping Study Details

The PEA/Scoping Study contemplates a conventional open pit mining operation with a processing facility operating over a 13 year life at a throughput of 5,500 tonnes per day (“tpd”). The planned processing route consists of milling followed by conventional agitated tank leach with sulphuric acid with Continuous Ion Exchange (“CIX”) employed for uranium recovery from the leach solution.

Key Production and Financial Parameters	
Mine life	13 years
Average annual throughput	2 million tonnes
Processing methodology	Tank Leach – CIX
Overall process recovery	95%
Open pit strip ratio (LOM)	4.0:1
Average diluted feed grade	840 ppm U ₃ O ₈
Average annual production	3.52 million lbs U ₃ O ₈
Total uranium recovered (LOM)	45.8 million lbs U ₃ O ₈
Financial Parameters	
Uranium price	USD\$65 / lb U ₃ O ₈
USD:AUD exchange rate	0.70
Average operating cost	USD\$23.30 / lb U ₃ O ₈
Initial CAPEX (including contingency)	USD\$316 million

Laramide Resources Ltd.

Sustaining CAPEX (LOM)	USD\$58 million	
Corporate tax rate	30%	
Royalties		
Qld State Government	5%	
IRC	1% (capped at \$10m indexed)	
Inflation	Not included	
	Pre-tax	Post-tax
NPV (10% discount Rate)	USD\$598 M	USD\$400 M
IRR	45.4%	35.8%
Payback period		2.5 years

PEA assumptions and details regarding the mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental aspects of the Project (the JORC “modifying factors”) are discussed and disclosed in the PEA/Scoping Study document which has been filed and available for viewing and download at www.sedar.com and the Company’s website www.laramide.com.

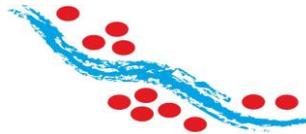

The previous PEA from 2007 was based largely on information acquired from Rio Tinto following the Westmoreland asset purchase. Since this time Laramide has completed several drilling campaigns, re-estimated the resource and has an improved knowledge of the metallurgical conditions required for cost effective uranium extraction on the Project. The updated PEA/Scoping Study reflects current inputs including currencies, commodity price forecasts, fuel costs and other input costs. The key differences between the 2007 PEA and the 2016 revised PEA are, as follows:

<i>Parameter</i>	<i>2007 PEA</i>	<i>2016 PEA</i>
<i>Resource Size</i>	48.5 Mlb	51.9 Mlb
<i>Mill Design Tonnage</i>	1.5 Mtpa	2 Mtpa
<i>Overall Uranium Recovery</i>	90.6%	95%
<i>Nameplate Production Capacity</i>	3 Mlb/a	4 Mlb/a
<i>Mine Life</i>	12 years	13 years
<i>Uranium Capture Technology</i>	Solvent Extraction	Continuous Ion Exchange
<i>Tailings Storage Technology</i>	Traditional Tailings Dam	In-pit, dry stacked

The Project is located in the North West Queensland Mineral Province, an area impacted by the closure of the Century Zinc mine. The total direct employment generated by the Project will be in the order of 220 to 250 for the 13 year mine life.

Mineral Resource Estimates

The May 2009 Mineral Resource estimate for Westmoreland has been reviewed to ensure compliance with JORC 2012 and is restated as the 2016 Mineral Resource. The mineral resource estimate has been classified under the Canadian Institute of Mining, Metallurgy and Petroleum’s (CIM) code of mineral classification and complies with National Instrument NI 43-101. The 2016 mineral resource estimate for Westmoreland is outlined in the following table (refer to notes and other details in Section 14 of the NI 43-101 report) and were prepared by Mr. A. Vigar of Mining Associates who is a competent person in accordance with the JORC code.

Laramide Resources Ltd.

Westmoreland Mineral Resource Estimates - 2016

Resource Category	Deposit	Tonnes	Grade % (U₃O₈)	M lbs U₃O₈
Indicated <i>cut-off 0.02% U₃O₈</i>	Redtree (Garee)	12,858,750	0.09	25.5
	Huarabagoo	1,462,000	0.08	2.7
	Junnagunna	4,364,750	0.08	7.8
	Subtotal	18,685,500	0.09	36.0
Inferred <i>cut-off 0.02% U₃O₈</i>	Redtree (Garee)	4,466,750	0.07	6.6
	Huarabagoo	2,406,000	0.11	5.8
	Junnagunna	2,149,500	0.08	3.6
	Subtotal	9,022,250	0.08	15.9

Note: Reported tonnage and grade figures have been rounded off from raw estimates to the appropriate number of significant figures to reflect the order of accuracy of the estimate. Minor variations may occur during the addition of rounded numbers.

The PEA LOM production targets are based on approximately 70% indicated resources and 30% inferred resources. The inferred resources are predominantly scheduled in the latter stages of the mine life and have had mining factors applied. No reserves for this project have been stated at this time.

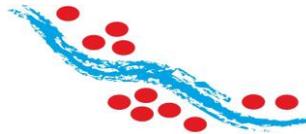

Copies of the 2009 Mineral Resource estimate and the 2016 Mineral Resource estimate have been filed and are available for viewing and download at www.sedar.com and the Company's website www.laramide.com.

PEA/Scoping Study Cautionary Statement

The preliminary economic assessment is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary economic assessment will be realized. There is no certainty that further exploration work will result in the inferred mineral resources being upgraded to indicated mineral resources. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Given the uncertainties involved, investors should not make any investment decisions based solely on the results of the PEA/Scoping Study. The abovementioned information refers to the press release April 21, 2016 – “Laramide Resources Announces Positive Results from the Updated PEA on the Westmoreland Uranium Project”. The Company confirms that all the material assumptions underpinning the production target and forecast financial information derived from the PEA continue to apply and have not materially changed.

NORTHERN TERRITORY JOINT VENTURES, Northern Territory, Australia

As part of its strategy to control ground contained within a large mineralized system in Australia, the Company entered into joint venture agreements on several large properties adjacent to Westmoreland in the Northern Territory, where exploration is continuing, and no state policy prohibiting the mining of uranium has ever existed. The Northern Territory is federally controlled and one of the jurisdictions favorable to uranium mining. At June 30, 2017, Laramide controls approximately 1,383 square kilometres under exploration licenses in the Northern Territory. This includes three joint venture or farm-in agreements. One joint venture is with Verdant Minerals Limited (through its subsidiary Central Australian Phosphate Limited, formerly NuPower Resources Ltd), and a second is with Gulf Manganese Corporation Ltd. (through its subsidiary Gulf Copper Pty Ltd – formerly Hartz Range Mines Pty Ltd); much of this area has only received preliminary exploration in the past.

Laramide Resources Ltd.

A third agreement is with Rio Tinto Exploration Pty Limited (“RTX”). The Farm-In and Joint Venture Term Sheet with RTX provided access to tenements that are situated geologically within the highly prospective Murphy Uranium Province and are along strike from Laramide’s flagship Westmoreland Project in northwest Queensland.

Exploration Costs - Northern Territory JVs	Additions Q2		Balance June 30	
	2017	2016	2017	2016
Drilling, field support and assays	-	-	-	-
Camp, field and land costs	-	-	63,967	63,973
Project engineering studies	-	-	2,521	2,521
Acquisitions of properties and data	-	-	849,487	849,487
General and administrative	10,842	-	174,376	35,055
Access Negotiation	-	-	144,942	61,507
Field consultants and salaries	-	-	293,421	285,561
Depreciation	-	-	-	-
Geophysics and surveyors	-	-	8,691	-
Translation adjustment	(30,977)	-41,999	10,286	(34,096)
Total	(20,135)	(41,999)	1,547,690	1,264,007

Note: Exploration costs are incurred in Australian dollars and converted to Canadian dollars at historical rates for purposes of the above table. Accounting convention requires that they be reported for financial statement purposes at the current year end exchange rate. The Translation adjustment represents the difference in the two rates.

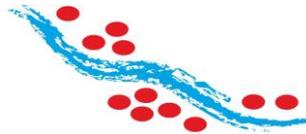

The summary of the Company’s joint ventures in the Northern Territory are, as follows:

Verdant Minerals Limited (through its subsidiary Central Australian Phosphate Limited) - Lagoon Creek Joint Venture

In May 2005, Laramide (“Lagoon Creek Pty”) entered into an agreement with NuPower Resources (now Central Australian Phosphate Limited) pursuant to which the Company can farm-in to granted exploration license EL23573, Lagoon Creek, in the Northern Territory, approximately 380 kilometres NNW of Mt Isa. Laramide has made qualifying exploration payments fulfilling the expenditure requirement of AUD\$3 million over a four-year period as required for 50% equity in the tenement. This 50% interest has been formally transferred to the Company. Previous exploration on the joint venture area has included: an airborne magnetics and radiometrics survey in 2005; ground radiometric surveys and scintillometer lines followed by 23 RC drill holes in 2006; a helicopter-borne regional stream sediment survey and a 9 hole diamond core drill program was undertaken in 2007. During 2011 and 2012, a helicopter geophysical survey over the tenement was conducted. Central Australian Phosphate Limited was taken over by Verdant Minerals Limited in January 2014. During 2015, the geophysical survey data was reprocessed and further evaluated by a company consultant who is working on the regional mineral systems analysis project. The Company has no intention to make more expenditures, nor do further work on this property in the short and mid-term and wrote off the balance of the capitalized exploration at the end of the 2014 financial year.

Gulf Manganese Corporation Joint Venture

Immediately north of the Central Australian Phosphate-Lagoon Creek tenement is a tenement held by ASX listed Gulf Manganese Corporation Ltd (through its subsidiary Gulf Copper Pty Ltd., formerly Hartz Range

Laramide Resources Ltd.

Mines Pty Ltd.). This tenement exhibits similar geological potential and is a part of what is a very significant and under-explored mineral district. Laramide, in the second quarter of 2005, signed an option to earn 90% of any resource pegged under mining tenure consequent to exploration over a defined area on the three Exploration Permits (“EPMs”) that Hartz Range owned in the Northern Territory. On October 8, 2014, Laramide announced it has entered into a Sale Purchase Agreement (“SPA”) to acquire 100% of the Gulf JV tenement EL 29898 from Gulf Copper Pty Ltd. (“Gulf”). Under the terms of the SPA Laramide must pay to Gulf AUD\$125,000 broken into three payments: AUD\$25,000 (paid) immediately; a further AUD\$25,000 subject to satisfactory completion of certain conditions (paid in March 2015); and the balance of AUD\$75,000 on transfer of the tenement title.

Previous exploration on the area has included: an airborne magnetics and radiometrics survey and soil sampling program in 2005; ground radiometric surveys and scintillometer lines followed by 4 RC drill holes in 2006; a helicopter-borne regional stream sediment survey and a 15 hole diamond core drill program was undertaken in 2007; in 2009, a program involving a scintillometer grid survey and soil sampling was commenced over targeted areas in the tenement. Results from the scintillometer survey were plotted and contoured, providing a ground radiometric signature of the target areas. Laramide followed up the results in 2010 by drilling approximately 1,000 metres to test three structural targets in the Westmoreland sandstone, which have an associated radiometric signature along strike.

The Company has no intention to make more expenditures or do further work on this property in the short or mid-term and wrote down the balance of the capitalized exploration at the end of the 2014 financial year. After such write-down, the book value of this property is \$132,397 at December 31, 2016.

Rio Tinto-Murphy Farm-In and Joint Venture, Northern Territory, Australia

In May 2011, the Company announced the signing of a Binding Farm-In and Joint Venture Term Sheet with Rio Tinto Exploration Pty Limited (“RTX”), pursuant to which the Company can joint venture strategically located uranium tenements in the Northern Territory (“Project”), that are situated geologically within the highly prospective Murphy Uranium Province and are along strike from Laramide’s Westmoreland Project in northwest Queensland. The Murphy Uranium Province produced high-grade uranium during the 1950s and stands out amongst the world’s attractive underexplored uranium provinces, having not seen any meaningful exploration since the 1970s.

Under the terms of the agreement, Laramide can earn 51% in the Project with the expenditure of AUD\$10 million over a 4-year period on exploration and development. The first AUD\$1 million of this earn-in is a firm commitment by Laramide. Approval to commence exploration was granted by the traditional landowners in November 2012.

The initial AUD\$1 million expenditure had not been completed by the required date of November 2013. Following several extensions agreed with RTX the date to complete the initial earn-in commitment of \$1 million in exploration activities was extended to November 2016. The other earn-in periods over the 4-year farm-in period also received corresponding extensions from the original completion dates. Unforeseen delays prevented on-ground exploration planned for the 4th quarter 2016 to allow the fulfillment of the initial earn-in commitment and the Company is working with RTX on other potential alternatives for the future of the Joint Venture tenements. During Q3 2014, Laramide completed a 16,281 line kilometres airborne geophysical survey over the tenements. Work was undertaken in 2015 as part of the regional mineral systems project analyzing the data available on the Murphy tenements in the context of the regional Westmoreland area.

AUSTRALIAN PROPERTIES – TENEMENT RENEWALS AND EXTENSIONS

Exploration permits are granted initially for a five-year period in Queensland and a six-year period in the Northern Territory. Extensions are granted periodically following the initial period.

Laramide Resources Ltd.

Tenement	Holder	Expiry Date/Date for Renewal	Location
EPM14558	Tackle Resources Pty Ltd	25-Jul-20	Queensland
EPM14672	Tackle Resources Pty Ltd	25-Jul-20	Queensland
EPM14967	Lagoon Creek Resources Pty Ltd	30-Jul-17 (renewal lodged)	Queensland
EL23573	Lagoon Creek Resources Pty Ltd/Central Australian Phosphate Ltd (Rum Jungle JV)	22-Dec-17	Northern Territory
EL29898	Gulf Copper Pty Ltd (Gulf Manganese JV)	14-Aug-17 (renewal lodged)	Northern Territory
EL9319	Rio Tinto Exploration Pty Ltd	3-Nov-17	Northern Territory
EL9414	Rio Tinto Exploration Pty Ltd	3-Nov-17	Northern Territory

The main Queensland tenement upon which the identified Westmoreland resource is situated is EPM14558. It was renewed for a period of three years after the initial five years expired in 2010, and then for a subsequent two years until July 2015. A further extension application for this tenement and the adjacent EPM14672 was successful and the tenements were renewed for a further five years until 2020.

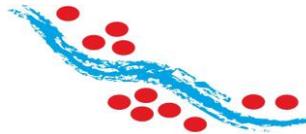

Initial grants and extensions involve commitments for rents and exploration expenditures throughout the term of the grant or extension. The current commitments for all tenements, as at June 30, 2017, are detailed in this report in the Commitments section and in Note 16(a) to the June 30, 2017 consolidated financial statements.

HOMESTAKE URANIUM PROPERTIES – Grants Mineral Belt, NM and Lisbon Valley, Utah

Exploration Costs - Homestake Properties	Additions Q2		Balance June 30	
	2017	2016	2017	2016
Camp, field and land costs	-	-	894,842	894,842
Acquisitions of properties and data	-	-	4,229,919	5,435,616
General and administrative	78,903	11,294	2,792,777	2,527,683
Environmental studies	-	-	364,134	364,134
Translation adjustment	(249,121)	(58,510)	1,513,480	1,693,196
Total	(170,218)	(47,216)	9,795,153	10,915,471

1. *Exploration costs are incurred in US dollars and converted to Canadian dollars at historical rates for purposes of the above table. Accounting convention requires that they be reported for financial statement purposes at the current year end exchange rate. The Translation adjustment represents the difference in the two rates.*

As discussed in the Australian properties sections earlier in this report, due to the current uranium environment, the Company plans to do only minimal work at the USA properties over the next year. The La Sal property is permitted for bulk sampling but there are not any plans to proceed further unless the market changes. Similarly, the plans for the La Jara Mesa property are to continue slowly with the legal work required for permitting. The total expenditure for the next twelve months is expected to be under \$100,000.

Laramide Resources Ltd.

In 2005, the Company entered into an agreement with Homestake Mining Company of California and La Jara Mesa Mining Company (collectively “Homestake”), both being wholly owned subsidiaries of Barrick Gold Corporation, to acquire Homestake’s uranium portfolio in the western United States.

Terms of the transaction require Laramide to pay Homestake a total of USD\$3,750,000 (CAD \$3,941,250) in cash. USD\$1,500,000 (CAD\$1,576,500) has been paid which includes the USD\$500,000 paid in September 2010 upon exercise of the option to purchase the La Sal property. The remaining balance of USD\$2,250,000 (CAD\$2,364,750) is represented by milestone payments tied to the permitting of the projects and commencement of commercial production. In addition, Laramide committed to expend and has paid USD\$1,500,000 (CAD\$1,827,000) by November 2007 on the properties and to pay a royalty of USD\$0.25 (CAD\$0.30) per pound of uranium (U308) on any production in excess of eight million pounds from the La Jara Mesa property.

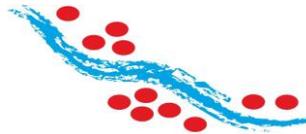

As discussed earlier in this report under the heading of Churchrock and Crownpoint Properties, under the purchase agreement with URI, Laramide has granted a purchase option to URI to purchase either or both of the LaSal and La Jara Mesa properties.

La Jara Mesa Property

La Jara Mesa is a sandstone hosted roll-front style deposit located within the formerly producing Grants Uranium District, approximately 10 miles northeast of the town of Grants in Cibola County, New Mexico, USA. Since the 1950s, considerable historic uranium exploration and mining activity has been done on La Jara Mesa and the surrounding area. Companies including United Nuclear Corporation, Gulf Mineral Resources Inc., Power Resources and Homestake Mining Company performed exploration work, comprising over 700 drill holes penetrating the various lithologies of the site as well as metallurgical test work. Metallurgical studies on La Jara exhibited strong recoveries (in the range of 92%) and potential underground access is quite straightforward via an inclined ramp from the valley floor. The mineral resource estimated for La Jara Mesa (Alinco GeoServices Inc., 2006) estimates Measured and Indicated mineral resources totaling 7,257,817 pounds of uranium (U₃O₈) that are contained in 1,555,899 tons at an average grade of 0.23% U₃O₈, and an additional 3,172,653 pounds of uranium (U₃O₈) contained in 793,161 tons at an average grade of 0.20% U₃O₈ as Inferred mineral resources on the property.

On the basis of encouraging results from drilling in 2007, Laramide submitted in April 2008, (amended October 2008) to the USDA Forest Service (“Forest Service”) an Amended Plan of Operations for Underground Development and Mine Production. The Amended October 2008 Plan seeks permits to proceed with an underground development program that will construct dual parallel inclines and an escape raise to access the body of mineralization. From underground in the mineralized zone, Laramide proposes to conduct mapping, longhole drilling with gamma probing, test mining and collection of bulk samples for metallurgical and mill compatibility studies. The resource lies approximately 700 feet below the surface and approximately 500 to 800 feet above the water table. It is important to recognize that Homestake received approval from Forest Service for a similar program in two separate years, 1984 and 1988. In both years, Homestake chose not to enter into production because of steep declines in the price of uranium.

In the years since these approvals were granted, the permitting process has become more complex and protracted, partly as a result of efforts to designate Mount Taylor (which lies just east of La Jara Mesa) as a so-called Traditional Cultural Property (“TCP”). This designation allows for additional comment and potential appeal from stakeholders who are concerned about potential development impacts to Mount Taylor. Despite this potential additional risk factor, Laramide believes its proposed plan conveys relatively low environmental and technical risk because 1) no mill is proposed to be constructed at site, and 2) the underground workings will be conducted in a “dry” environment well above the water table and as such, should not penetrate any ground water. On February 4, 2011, Laramide and other opponents of the TCP designation were successful in New Mexico State District Court in defeating the imposition of a TCP designation under several points. This

Laramide Resources Ltd.

decision was then advanced to the New Mexico Court of Appeals. The Appellant Court certified the TCP Appeal to the New Mexico Supreme Court. In February 2014, the New Mexico Supreme Court ruled and overturned the lower court's findings as to the TCP and all points that had been ruled in Laramide's favor were overturned. The impact of the TCP classification is that the Company will communicate with both the National Historic Preservation Office and the State Historical Preservation Office. Without a TCP classification the Company would deal directly with only the federal level. Otherwise, in the long run, this ruling makes little difference in the going forward plans for the project since the Forest Service has always managed the Mount Taylor area under TCP classification.

Data collection for the Environmental Impact Statement ("EIS") is collected in compliance with Forest Service protocol. Pursuant to this exercise, in March 2009, Laramide contracted Golder Associates ("Golder") to work directly with the Forest Service, in order to collect the required EIS data. Golder also provides support to the Forest Service in public meetings that are required as part of the EIS process. In addition, Laramide has entered into formal discussion with the New Mexico Mining and Minerals Division, which requires documentation similar to that required by the Forest Service. The Golder engagement also includes the development of a sampling and analysis plan for the State's review and concurrence.

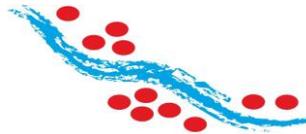

On May 18, 2012, the U.S. Forest Service ("USFS") issued a Draft Environmental Impact Statement ("DEIS") for the Company's La Jara Mesa uranium project. The issuance of the DEIS represents a significant milestone in the mine permit process, which would allow underground development activities and mine production at the La Jara Mesa project.

With the completion of this stage of USFS's review and notice of availability of the DEIS published in the Federal Register, there was a public review of the DEIS for a 60-day comment period ending July 17, 2012. Comments received from this public review process are still being considered by the USFS. Progress will continue with the National Environmental Policy Act ("NEPA") review process of La Jara Mesa, which will ultimately lead to the completion of the Final Environmental Impact Statement and Record of Decision ("ROD"). A copy of the DEIS can be found at Laramide's website (www.laramide.com) or link: http://www.fs.fed.us/nepa/nepa_project_exp.php?project=25654

La Sal Project

As part of the 2005 acquisition of uranium properties from Homestake, Laramide purchased an option to acquire the La Sal property, located within the mining district in southeastern Utah. This option was exercised in Q3 2010, as announced by press release September 13, 2010. In accordance with the terms of the original purchase agreement, a further payment of USD\$250,000 to Homestake will be required upon successful permitting of the La Sal property, with a final payment of USD\$500,000 due upon commercial production. In addition, as part of the title transfer process, Laramide has provided disclosure of the required payment options to legacy royalty holders as described in the above-mentioned press release, which allows for royalty holders to elect to either sell their shares or to receive advance royalties pursuant to a defined schedule.

In April 2012, the Company made a proposal to each of the current royalty holders ("Royalty holders"), who are the owners of a proportionate interest in the proceeds on the production from the La Sal property ("units"), offering to either sell back the royalty stream or receive advance royalty payments. In the event the Royalty holders elected to sell back the royalty stream, the Royalty holders may choose to sell the royalty for either USD\$15 (CAD\$20) per unit payable on June 24, 2012 or USD\$30 (CAD\$40.2) per unit payable 121 days after issuance and receipt of all necessary permits required to bring the mine into production. In the event the Royalty holders elected to receive advance royalty payments, the Royalty holders may choose to receive an advanced royalty of USD\$8 (CAD\$10.7) per unit payable on June 24, 2012, or USD\$12 (CAD\$16) per unit payable 121 days after issuance and receipt of all necessary permits to bring the mine into production, or USD\$15 (CAD\$20) per unit on the date 8,500 tons of saleable ore is produced over any 30 day period or when 50,000 tons of saleable ore has been produced from the La Sal property.

Laramide Resources Ltd.

From elections made by and received from the Royalty holders, the Company paid USD\$365,667 (CAD\$490,981) to Royalty holders electing the USD\$8 (CAD\$10.7) per unit advanced royalty payment option, and recorded the payment as a prepaid royalty on the consolidated balance sheet. In addition, the Company was obligated to pay USD\$154,500 (CAD\$152,182) to Royalty holders who elected for the USD\$15 (CAD\$20) per unit purchase and sale option and recorded the payment as an addition to mineral properties and related deferred costs. Based on the alternate elections made by the Royalty holders, the Company is contingently liable for potential payments of USD\$1,566,420 (CAD\$2.1 million) and USD\$685,625 (CAD\$0.9 million), based on production thresholds and permitting.

La Sal has a 1,200 metre long access drive into the deposit from its previous Homestake ownership. Homestake completed a positive feasibility study on the project in 1978 and was ready to place the project into production when the price of uranium collapsed. The plan of operation has been deemed administratively complete by the U.S. Bureau of Land Management.

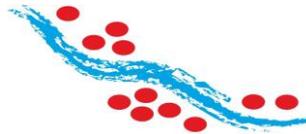

In November 2010, Laramide filed an Exploration Plan of Operations for the underground exploration program with the Bureau of Land Management (“BLM”). The BLM determined the Exploration Plan of Operations to be administratively complete on April 5, 2011 and, because the exploration activity would be located on BLM-administered public lands, the agency decided to prepare an Environmental Assessment (“EA”) in compliance with the NEPA (National Environmental Policy Act).

This EA documents the environmental analysis of the proposed underground exploration program and provides the BLM with information to make an informed decision on whether to approve the project. The EA process also provides a forum for two public reviews and comments on the project and its associated relevant issues and environmental analysis. A final Environmental Assessment was prepared by the Moab Field Office of the US Bureau of Land Management and was made public on October 7, 2011. This initiated the final 30 day public comment period following which a decision with respect to the permit could be expected. The public comment period closed and no formal notifications were received from the BLM. Following successful completion of the second comment period, the BLM would issue a Decision Record (“DR”) and “Finding of No Significant Impact” (“FONSI”), approving the selected alternative, whether that is the proposed action or another action alternative.

In June 2012, the BLM issued a Record of Decision approving the Exploration Plan of Operations at the Company’s La Sal Project. The issuance of this Plan of Operations approval from the BLM and the more recent State of Utah permit allows Laramide to commence underground exploration and development activities which if positive, could ultimately lead towards commercial production. In addition, as a result of the BLM’s finding of no significant impact, the preparation of an environmental impact statement will not be required. The decision of the BLM was then appealed by Uranium Watch and on March 3, 2015 the appeal was denied.

A copy of the Final Environmental Assessment (“EA”) is available on Laramide’s website (www.laramide.com) The Record of Decision including Conditions of Approval and Finding of No Significant Impact can be found at the following link to the BLM’s Utah Website: http://www.blm.gov/ut/st/en/fo/moab/nepa_enbb.html

La Sal is located in close proximity to Energy Fuels’ White Mesa Mill in Blanding, Utah. In January 2013, the Company announced that Laramide and Energy Fuels had entered into a toll milling agreement, whereby Energy Fuels’ White Mesa Mill will process all material produced from Laramide’s 100% owned and operated La Sal II Uranium Mine Project in Utah. The agreement had a two-year term with an optional three-year extension and commenced in January 2013. Under the terms of the agreement, Laramide will transport material produced at La Sal II to Energy Fuels’ nearby White Mesa Mill for processing of up to 20,000 tons during the test phase. Laramide will pay to Energy Fuels the costs to mill its ore, a capital charge plus a toll

Laramide Resources Ltd.

milling fee per ton of ore, which will be partly linked to the long-term uranium price. Laramide's agreement with Energy Fuels accommodates additional ore production once La Sal II is permitted for full production.

Laramide commenced on-site programs leading towards the rehabilitation of the existing decline and ventilation raise, along with the installation of temporary surface support facilities. These activities also include: site access road work, development of safety procedures/plans, and sourcing of a contract mining company to reopen the mine site. Exploration and mine development activities have been temporarily suspended pending a stronger uranium market and the availability of Energy Fuels' White Mesa Mill for toll milling. Project permits are being maintained during the suspension period.

As a result of the 2015 letter of intent, an option was granted to URI to acquire the La Sal project, the Company has effectively committed to a plan to sell the property with a book value of \$3,336,908 at December 31, 2015, which was presented as mineral property held for sale in the consolidated balance sheet.

OTHER HOMESTAKE PROPERTIES, USA

The two other Homestake properties are the Los Ochos and the Melrich properties, both of which are considered to be less significant properties, and neither of which received any exploration expenditures in the last two years.

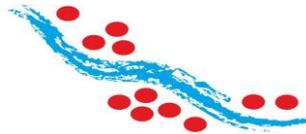

CHURCHROCK AND CROWNPOINT PROPERTIES, New Mexico

On January 5, 2017, the Company announced that it had closed a transaction with Uranium Resources Inc. ("URI") pursuant to which the Company acquired 100% of an advanced stage portfolio of high-quality In Situ Recovery ("ISR") projects in New Mexico through the acquisition of Hydro Resources Inc. (HRI). The properties are principally comprised of the Churchrock and Crownpoint projects, in addition to nearby assets.

These projects have been previously burdened by significant net smelter royalties, specifically the sliding scale royalty, held by Laramide Resources of up to 25% of gross revenue covering certain areas of the properties as described in Note 9 (4) to the December 2015 Consolidated Financial Statements. Following the acquisition by Laramide a leading In Situ Recovery ("ISR") division is created operating in a tier one jurisdiction with enhanced overall project economics and potential low operating costs.

Total consideration paid by Laramide to URI consisted of USD\$2.5 million (CAD\$3.3 million) in cash USD\$250,000 (CAD\$335,675) of which was previously paid), the issuance by Laramide to URI of 2,218,333 units ("Units"), a promissory note in the amount of USD\$5.0 million (CAD\$6.7 million) with three anniversary payments due on January 5, 2018 of USD\$1.5 million (CAD\$2 million), 2019 USD\$1.5 million (CAD\$2 million), and 2020 USD\$2.0 million (CAD\$2.7 million), and a retained net smelter royalty on the Projects valued at USD\$4.5 million (CAD\$6 million). The transaction took over a year to complete and includes the approval from the U.S. Nuclear Regulatory Commission to transfer materials licenses for the properties to Laramide.

Each Unit consists of one common share in the capital of the Company and one share purchase warrant (a "Warrant"), with each Warrant entitling the holder to purchase one additional common share at a price of CAD\$0.45 for a period of 60 months from the date of closing of the Offering. In the event that the common shares trade at a price of C\$1.00 or greater for a period of 10 consecutive trading days, the Company may accelerate the expiry date of the Warrants by giving notice to the holders and, in such case, the Warrants will expire on the 30th business day after the date on which such notice is given by the Company. The common shares and Warrants issued pursuant to URI are subject to a statutory four-month hold period expiring on

Laramide Resources Ltd.

May 6, 2017. The exercise of the Warrants issued to URI shall were subject to the approval by shareholders which was received at the annual and special meeting of the shareholders held April 27, 2017.

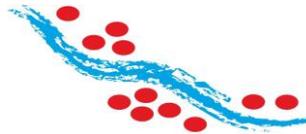

Acquisition Highlights

- LAM through the acquisition if HRI owns mineral interests, mining claims and other assets that comprise the Churchrock and Crownpoint mining projects and the recently consolidated Strathmore/Churchrock assets;
- HRI also holds a license from the United States Nuclear Regulatory Commission for production of uranium from Sections 8 and 17 of the Churchrock project, and the Crownpoint project;
- Also, the United States Nuclear Regulatory Commission has approved for the construction of a Central Processing Plant at the Crownpoint property. While the permit to build this facility has been granted, a mining study has not been filed to support the technical feasibility or economic viability of the Central Processing Plan;
- Historical estimates and a Feasibility Study completed by HRI of uranium mineral resources have been completed on the Properties. Collectively, the Properties' historical mineral resources of uranium are considered "historical estimates" for purposes of Canadian securities legislation and NI 43-101 and are therefore "NI 43-101 compliant". However, they cannot be considered current mineral resources. There are four historical resource estimates from 2005 to 2012, summarized in a table later in this section;
- Historical estimates suggest the mineral resources may be amenable to ISR;
- In this Feasibility Study on Churchrock's Section 8, prepared by Behre Dolbear & Company, the existing royalties, in particular Laramide's royalties, were highlighted as substantially impacting the project economics;
- Attractive acquisition costs for Laramide on an approximate USD\$0.21 per pound global basis;
- Laramide has expertise in New Mexico through its current ownership of the La Jara Mesa uranium project and the Company's Chief Operating Officer has strong ISR experience globally;
- Multiple proximal uranium properties provide the opportunity for further consolidation and toll-milling revenues;
- The properties are located in a mining district in a jurisdiction with excellent infrastructure; and
- URI will also be granted an option to purchase, through and including January 5, 2018, Laramide's interest in a subsidiary that owns the La Sal project in Utah for USD\$4.0 million, effected by a reduction in principal of the Note from USD\$7.25 million to USD\$3.25 million with respective adjustments to the principal and interest payment schedule.

Historical Resource Estimates

The following table summarizes the historical and foreign resource estimates which are applicable to the Properties subject to the Proposed Transaction. The discussion that follows addresses the TSX and ASX requirements for the reporting of these types of resource estimates.

[Table follows on next page]

Laramide Resources Ltd.

Title of Report	Source of Report	Historical Resource Clarification	Tons	Average Grade % U₃O₈	Lbs. of U₃O₈
Resource Estimate on Churchrock March 1, 2010	Behre Dolbear & Co. prepared for URI	Measured and Indicated	N/A	N/A	18.6 million
Including: Churchrock Section 8 Feasibility Study prepared in January 2012	Behre Dolbear & Co. prepared for URI	Proven and Probable Reserve plus Non- reserve mineralized material	3.1 million 1.0 million	0.10 0.09	6.5 million 1.494 million
Resource Estimate on Mancos March 1, 2010	Behre Dolbear & Co. prepared for URI	Indicated Resource	5.2 million	0.11	11.3 million
Crownpoint Resource Estimate March 1, 2010	Behre Dolbear & Co. prepared for URI	Indicated Resource	N/A	N/A	15.3 million
Strathmore/Churchrock Resource Estimate (December 20, 2005)	David C. Fitch prepared the Resource Estimate for Strathmore Minerals Corp.	Measured and Indicated Resource Inferred Resource	6.22 million 1.95 million	0.10 0.09	11.848 million 3.525 million
Scoping Study (April 4, 2011)	Behre Dolbear prepared the Scoping Study for Strathmore Minerals Corp.				

Cautionary Statements

The estimates are historical/foreign estimates and are not reported in accordance with the JORC Code. A qualified person has not completed sufficient work to classify these historic mineral resources as current mineral resources or in accordance with the JORC code; and the Company is not treating the historic resources as current. It is uncertain that following evaluation and/or further exploration work that these foreign estimates will be able to be reported as mineral resources in accordance with the JORC Code.

Relevance, Reliability and Materiality of the Historical or Foreign Estimates

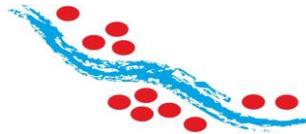

Given the high quality of the historic work completed and the respective mining companies' reputations, the Company believes the resource estimates to be both relevant and reliable. The Company believes that both the exploration undertaken and the initial resource calculations appear to have been undertaken professionally and to industry best practice. The historical estimates are relevant and material to Laramide, as, they represent a major component of the resources under the control of the Company.

Categories of Mineralisation

The Company believes that the categories of mineralisation reported in the resource calculations shown in the above table are similar to the JORC code (2012) classifications and the classifications under NI 43-101.

More information

No more recent information or estimates than the reports described in the table are available.

Laramide Resources Ltd.

Summary of work programs and key assumptions, parameters, and methods used to prepare estimates

Historical exploration work programs relating to the preparation of historical resource estimates are summarized below:

The Churchrock Project

- Churchrock (including Section 8, 9 & 17) – The Churchrock project was drilled extensively by former operators Phillips Petroleum, Santa Fe Minerals and United Nuclear–Teton from the 1950s. Following acquisition URI later completed several core holes in the 1990s to gather metallurgical information for the preparation of a Feasibility Study on Section 8. The Churchrock resource was calculated using the general outline method employing a cut off of 4 feet of 0.075% U₃O₈ (0.3 GT).
- Mancos – Section 7 of the Mancos Project was drilled by Quinta (1958 to 1961) and subsequently United Nuclear of Santa Fe. A total of 261 holes have been drilled on Sections 7 and 12. Section 13 was drilled by Phillips Petroleum (48 holes in 1957 and 1958) and Teton Exploration Services (356 holes in 1971 – 1980). The Mancos resource was calculated using the general outline method employing a cut off of 7 feet of 0.08% U₃O₈ (0.5 GT).
- Strathmore/Churchrock – The property is in the Grants Mineral Belt in northwest New Mexico in Section 4, Township 16 North – Range 16 West (T16N-R16W), New Mexico Principal Meridian in the main part of the Churchrock district. Kerr-McGee began drilling on the property in 1967. A total of 165 drill holes have been completed to date totaling approximately 306,000 feet (data from drill summary sheets). Most of the drilling was performed during the period 1967 through 1977, with additional drilling up to 1991. The Strathmore/Churchrock resource was calculated using the general outline method employing a cut off of 6 feet of 0.05% U₃O₈ (0.3 GT).

Crownpoint

- Mineralization was discovered by Conoco at Crownpoint in 1972. Follow-up drilling resulted in Conoco plans for an underground mine. Wyoming Mineral (Westinghouse) joined Conoco in a 50/50 joint venture and eventually acquired 100% of the project in 1982. Conoco and Wyoming drilled 148 holes in the southeast ¼ of section 24. Section 9 has not been extensively drilled. URI acquired the facilities, remaining equipment, leases and all data in 1988. The URI position in the Crownpoint area consists of four contiguous tracts:
 - Walker Lease – 40% interest in the SE ¼ of Section 24;
 - Ten “CP” unpatented lode claims in the SW ¼ of Sect 24;
 - Two “Consol” unpatented lode mining claims in the SE ¼ of Sect 25; and
 - Eight “Hydro” unpatented mining claims in the NE ¼ of Sect 25.
- The resource number stated above for Crownpoint considers 100% of the mineralization in all projects apart from the Walker lease where 40% of the mineralization is included. The Churchrock resource was calculated using the general outline method.

The Company is comfortable that the resource estimation methods used for the historical resource calculations and the cut-off grade and GTs employed are appropriate for the style of deposit. The polygonal method and its variant, the general outline method were in general use for resource calculation in the Grants Mineral Belt by the U.S. A.E.C. (Department of Energy), Ranchers Exploration and Development Corporation and other companies.

Laramide Resources Ltd.

In all cases exploration was performed by drilling vertical holes from the surface using truck mounted rotary mud drill rigs. Holes were then logged using downhole measurements of gamma radiation to determine the equivalent value of mineralization. Most operators also logged resistivity and spontaneous potential. On some projects intervals of mineralization were cored to obtain samples for laboratory analysis of U_3O_8 , radiometric U_3O_8 , other elements of interest, and metallurgical testing.

Further work is required to verify the historical foreign estimates as current mineral resources and proposed timing of that work.

To verify the historical resource estimates for reporting as current resources under NI 43-101 or JORC the Company considers the following steps to be necessary:

- A review of the estimate basis and raw data inputs to the historical resource estimates by a suitably Qualified Person;
- A review of the assumptions made in the historical resources that identified the historical resources as ISR amenable;
- Additional data in terms of new drilling and/or resource modelling may be required for some or all of the individual resource areas.

The Company intends to complete the work required to report current resources under the NI 43-101 and JORC Code within 12 months of the Closing subject to access requirements and market conditions being favorable.

Before the January 2017 acquisition, the Company already owned royalties on the New Mexico properties owned by Hydro Resources Inc.

- In December 2006, the Company acquired a portfolio of uranium royalties in New Mexico, USA from United Nuclear Corporation ("United Nuclear"), a wholly owned indirect subsidiary of General Electric Company ("GE") since 1997. The royalty portfolio covers three separate parcels of mineral leases (Section 8, Section 17, and Mancos) in the Churchrock area of McKinley County. The properties were owned by Hydro Resources Inc. who acquired them from United Nuclear in a series of transactions between 1986 and 1991.

Terms of the acquisition were USD\$9.25 million (CAD\$11.3 million) in cash, structured as follows:

- USD\$3.5 million (CAD\$4,071,900) at closing (paid);
- USD\$3 million (CAD\$3,153,000) on issuance of the final regulatory permit required to allow production to commence on Section 8 (permits not yet issued);
- USD\$1.25 million (CAD\$1,313,750) on issuance of the final regulatory permit required to allow production to commence on Section 17; and
- USD\$1.5 million (CAD\$1,576,500) on issuance of the final regulatory permit required to allow production to commence on Mancos (also known as Sections 7,12, and 13).
- In April, 2015, Laramide signed an agreement to purchase from an independent group a 6% mine price royalty on the SE/4 of Section 8 of the Churchrock in-situ project located in the Grant's Mineral District. Terms of the Agreement required USD\$50,000 upon signing of the Agreement (paid) and USD\$1,975,000 on or before the option expiry date of April 10, 2016. In April 2016, the option exercise price was extended to April 10, 2017 for an extension fee of USD\$60,000 (paid) and in May 2017 was extended again for 1 year for a fee of USD\$75,000 (paid).

The Company will continue to meet the purchase obligation as they become due, effectively buying-back the royalties.

INVESTMENTS

As detailed in Note 7 to the interim condensed consolidated financial statements, the investments carried on the balance sheet at June 30, 2017 are mainly held for strategic investment purposes, with non-uranium holdings providing a source of cash when market conditions favour a sale. The sale or disposition of the investments is subject to certain conditions and restrictions related to the long-term debt to Extract. Laramide continues to be one of the largest shareholders of Treasury Metals Inc. with a disclosed position of 3,067,000 shares at June 30, 2017 (worth \$1.8 million based on the price at that date).

Treasury Metals Inc.

Treasury Metals Inc. ("Treasury Metals") is a gold focused exploration and development company with assets in Canada and is listed on the Toronto Stock Exchange ("TSX") under the symbol "TML". Treasury Metals was a spin-off company of Laramide, which completed an IPO on the TSX in 2008. Treasury Metals Inc.'s 100% owned Goliath Gold Project in northwestern Ontario is slated to become one of Canada's next producing gold mines. With first-rate infrastructure currently in place and gold mineralization extending to surface, Treasury Metals plans on the initial development of an open pit gold mine to feed a 2,500 per day processing plant with subsequent underground operations in the latter years of the mine life. Treasury Metals is currently in the mine permit process and working towards completion of a feasibility study on the Goliath Gold Project. Full information regarding Treasury Metals Inc. can be found on the Treasury Metals website at www.treasuremetals.com.

Uranium Investments

Laramide's uranium investments were made for strategic purposes, and include 383,218 shares of Uranium Equities Ltd., 701,461 shares of Phos Energy Inc., 8,700,000 shares of Khan Resources Inc., and 120,000 shares of Virginia Energy Resources Inc.

Khan Resources Inc.

Notwithstanding the calibre of its flagship Dornod Project (which was the rationale for Laramide's investment position), Khan has faced progressive uncertainties in Mongolia in recent years in relation to the security of its mineral tenure and in its ability to successfully implement the mining and development agreements that would allow for the commercial development of Dornod. In July 2009, the Government of Mongolia promulgated its Nuclear Energy Law, which among other items, provided the State with 51 per cent of the Dornod property without compensation to prior owners. In 2010, Khan embarked on a vigorous multi-faceted legal strategy.

On May 18, 2016, Khan announced that they and the Government of Mongolia signed the settlement documentation required for the release of USD\$70 million to Khan.

On November 10, 2016, Khan announced that the shareholders of Khan have approved the special resolution for the voluntary liquidation and dissolution of Khan. Pursuant to the winding up, Khan made an initial distribution of CAD\$0.85 per share by way of a return of capital, paid to shareholders of record at November 22, 2016. Laramide received \$1,912,500. In March 2017, Khan announced that it had signed a definitive agreement with Arden Holdings Ltd. whereby Arden would acquire all of Khan's outstanding shares for cash of C\$0.05 per share. In May 2017, Khan announced that the pending transaction with Arden had been cancelled due to insufficient shareholder support.

At Khan's Annual and Special Meeting held May 5, 2017, Mr. Marc Henderson, a Board Director of Khan and the President and CEO of Laramide Resources Ltd., was re-elected to the Board of Khan Resources Inc. and was appointed Interim CEO of Khan.

Laramide Resources Ltd.

PhosEnergy Ltd.

PhosEnergy is an unlisted Australian public company progressing the development of the PhosEnergy Process – a technology designed to recover uranium, as a by-product, from phosphate streams in the phosphate fertilizer industry. Cameco Corporation is the majority owner of the PhosEnergy Process having invested over USD\$21 million to earn a 73% interest. Laramide owns 701,461 shares of PhosEnergy Ltd. PhosEnergy Ltd. and Cameco are operating a demonstration plant facility in the USA to prove the commercial viability of the PhosEnergy Process.

RESULTS OF OPERATIONS - FINANCIAL

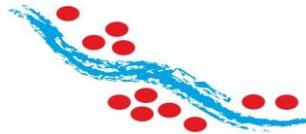

Selected Quarterly Financial Information

The following table summarizes selected financial data for Laramide for each of the last eight quarters. The information set forth below should be read in conjunction with the June 30, 2017 interim condensed financial statements and the related notes thereto. The financial information was prepared by management in accordance with International Financial Reporting Standards (“IFRS”), including the relevant prior year comparative amounts. Detailed explanations of quarterly variances are included in each quarterly MD&A filed on SEDAR.

	2017		2016				2015	
(\$ 000's except loss per share and Total Assets)	Q2	Q1	Q4	Q3	Q2	Q1	Q4	Q3
Revenues (losses)	\$15	\$0	\$1,771	\$385	\$390	\$444	\$71	\$277
Expenses	\$680	\$649	\$1,057	\$864	\$655	\$569	\$415	\$450
Write- down / de-recognition of available for sale investments	\$0	\$0	\$78	\$0	\$0	\$0	\$0	\$0
Write- down of mineral properties	\$0	\$0	\$1,206	\$0	\$0	\$0	\$0	\$485
Deferred income tax gain (loss)	\$0	\$0	\$581	\$0	\$0	\$0	(\$3,697)	\$0
Net loss	(\$665)	(\$649)	\$12	(\$479)	(\$265)	(\$125)	(\$4,041)	(\$658)
Net loss per share (basic and diluted)	\$0.00	\$0.01	\$0.01	\$0.01	\$0.00	\$0.00	\$0.00	(\$0.01)
Other comprehensive income (loss)	(\$2,057)	(\$523)	(\$3,802)	\$2,570	(\$1,746)	(\$523)	\$4,262	(\$2,302)
Total Comprehensive income (loss)	(\$2,722)	(\$1,172)	(\$3,790)	\$2,091	(\$2,011)	(\$648)	\$221	(\$2,960)
Total Assets (\$ millions)	\$90	\$93	\$79	\$82	\$79	\$81	\$82	\$76

Revenue variances are mainly the result of the realized gains and losses from the sale of shares of Khan Resources and Treasury Metals. In Q4 2016, \$1.9 million was received as return of capital from its investments in Khan Resources of which \$1.4 million was recorded in income.

Expense variances quarter to quarter are mainly due to the vesting cost of the various stock option issuances; also, until Q4 2015, there was a quarterly charge of approximately \$108,000 for interest and transaction costs on the \$5,000,000 loan facility received from Anglo Pacific Group, which increased to approximately \$420,000 starting in Q1 2016, with the refinancing debt with Extract, mainly due to its shorter period against the period of the Anglo Pacific debt, resulting in higher transaction costs charges. In Q1 2017 the interest charges have increased approximately \$80,000 per quarter as a result of the USD\$5 million promissory note owed to

Laramide Resources Ltd.

Uranium Resources Inc. In Q4 2016, the Company recognized the impairment in its AFS investments in Virginia Energy Resources Ltd. recording \$0.1 million in the statements of operations. In Q4 2016, the Company recorded \$1.5 million write-down in La Jara property in the USA and, as a result, there was a \$1.2 million charged to the consolidated statements of operations and \$0.3 million charged to other comprehensive income. In Q3 2015, the Company recorded \$0.5 million write-off of some mineral properties in Australia. There is a \$0.6 million of deferred income tax recovery in Q4 2016 and an expense of \$3.7 million in Q4 2015.

Quarterly fluctuations in other comprehensive income are largely due to changes in the market values of the available for sale investment portfolio, realized gains or losses on the sale or write-down of the available for sale investment portfolio transferred into the statement of operations, and to the foreign currency translation adjustment resulting from the difference between the functional currency and presentation currency rates applied to non-monetary foreign currency net assets.

The fluctuation in Total Assets from one quarter to the next is primarily a function of cash increases through the issuance of shares and the exercise of warrants and options, the financing through long-term debt, the valuation at fair market value of the investments, the foreign currency translation effect of the net assets kept in the Australian and USA subsidiaries and the use of working capital in the operating expenses of the Company. At June 30, 2017, the \$10.4 million increase in total assets versus the total assets as of December 31, 2016 is mainly due to a \$11.4 million of consideration incurred in the current period for the purchase of Hydro Resources Inc., \$2 million of net cash received from the Q1 2017 private placement and \$1.4 million received from the exercise of options and warrants partially offset by \$0.9 million for foreign currency translation loss in mineral properties and \$1.8 million of working capital used in the operating activities.

Three months ended June 30, 2017 compared to three months ended June 30, 2016

The net loss for the second quarter of 2017 was \$672,968 compared to a net loss of \$264,972 for the same period of 2016. The variances are summarized, as follows:

- In Q2 2017 audit and legal fees increased by \$53,890 compared to Q2 2016 mainly due to the inclusion of \$16,000 of non-accrued additional fees for the mineral properties valuation assessment for the 2016 audit, and an additional \$8,000 of audit fees accrual to provide for 2017 audit valuation work, and to \$20,000 of general legal fees incurred in the quarter in excess of 2016.
- There was \$nil of consulting fees in Q2 2017; in Q2 2016, there was a \$9,852 reversal of over accrued consulting expenses.
- The Q2 2017 interest expense of \$182,396 is \$67,999 higher than \$114,397 of Q2 2016 due to the USD\$5 million promissory note to URI issued in the current year.
- In Q2 2017 there is \$256,636 of vesting of stock options costs compared to \$32,338 in Q2 2016 due to the higher balance of unvested options in the current period.
- The amortization of property and equipment is \$11,091 higher in Q2 2017 against Q2 2016 mainly due to the amortization of the equipment acquired in the purchase of Hydro Resources Inc.

The above indicated lower revenues and higher expenses were partially offset by the following items:

- In Q2 2016, there is a net gain of \$388,862 from the sale of 600,000 shares of Khan Resources and 461,000 shares of Treasury Metals. The \$14,885 gain of the current period was due to the sale of 50,000 shares of Treasury Metals and 100,000 shares of Khan Resources.
- Office and administrative expenses in Q2 2017 had a slight decrease of \$7,887 compared against Q2 2016.
- The amortization of transaction costs is \$171,875 lower in Q2 2017 versus Q2 2016 due to the longer amortization period of the debt with Extract.

Laramide Resources Ltd.

- In Q2 2017, there is a \$224,452 exchange gain versus a \$69,977 gain in Q2 2016 mainly due to the 2.5% devaluation in Q2 2017 of the USD against the 0.5 devaluation Q2 2016. Such devaluation of the USD had a favourable effect in the Company's USD debts with Extract and URI.

Six months ended June 30, 2017 compared to six months ended June 30, 2016

The net loss for the 6 months ended June 30, 2017 was \$1,471,172 compared to a net loss of \$389,963 for the same period of 2016. The variances are summarized, as follows:

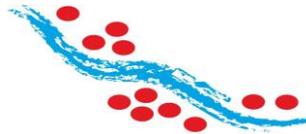

- In 2017, there is a net gain of \$14,885 from the sale of 100,000 shares of Khan Resources and 50,000 shares of Treasury Metals. In 2016 there was a net gain of \$832,652 from the sale of 1.4 million shares of Khan Resources and 461,000 shares of Treasury Metals.
- Office and administrative expenses in 2017 increased by \$81,191 compared to the same period of 2016 mainly due to the \$70,650 increase of investor relations expenses of which \$30,000 corresponds to European and Marketing IR services, \$16,200 of higher Annual General Meeting expenses, \$6,600 to higher PDAC event expenses and \$5,541 to distribution of press releases and newsletters. Also, in 2017 there is \$29,000 of higher travel expenses for attending the conferences of Adelaide and Denver and \$9,000 of higher filing expenses in 2017.
- In 2017 audit and legal fees increased by \$45,692 with respect to 2016 mainly due to \$20,000 of legal fees not incurred in the previous year and \$16,000 of audit fees adjustment for the mineral properties valuation assessment work.
- The 2017 interest expense of \$354,844 is \$119,702 higher than \$235,142 of 2016 due to the USD\$5 million promissory note, which has a 5 per cent annual interest rate, issued to URI in 2017.
- In 2017, there is a \$198,752 exchange gain versus a \$328,494 gain in 2016 mainly due to the 3.3% devaluation in 2017 of the USD against the 6.6% devaluation in 2016. The devaluation of the USD has a favourable effect in the Company's US currency denominated debts.
- The amortization of property and equipment is \$27,81 higher in 2017 against 2016 mainly due to the amortization of the equipment acquired in the purchase of Hydro Resources Inc.
- In 2017 there is \$316,267 of vesting of stock options costs compared to \$119,500 in 2016 due to the higher balance of unvested options in the current period.

The above indicated lower revenues and higher expenses were partially offset by the \$339,903 lower amortization of transaction costs in 2017 versus 2016 due to the longer amortization period of the debt with Extract.

Liquidity

As at June 30, 2017, the Company is reporting a working capital deficiency of \$3,331,450. The sale or disposition of certain investments is subject to conditions and restrictions related to the debt to Extract as indicated in Note 12 to the interim condensed consolidated financial statements. Sale of these investments would require that the proceeds of the sale up to \$2 million be repaid against the outstanding loan. As such these investments, because of the restriction, have been classified as non-current assets.

Current uranium market conditions remain insufficiently robust to incentivize new production and the Company has decided to proceed cautiously until the market improves. In the short term, the Company plans to update the 43-101 on the Churchrock and Crownpoint properties to a compliant mineral resource and to advance the Westmoreland project in only those areas that are necessary. The cost for the work plan for both the Churchrock, Crownpoint, and Westmoreland projects, and for its corporate and field offices, public company costs, interest, tenement renewals, and general and administrative expenses is approximately \$4.6 million. The Company plans to finance expenditures for the work plan from working capital and equity financings throughout the year.

Laramide Resources Ltd.

In addition, as at June 30, 2017, the Company has 8,805,000 stock options outstanding exercisable at an average price of \$0.39. Of these, 2,950,000 are exercisable at an average price of \$0.28 which is below current market prices and may be a source of approximately \$1.6 million. The Company has 23,478,899 warrants outstanding at an average exercise price of \$0.45. Of these, 1,200,000 are exercisable at \$0.35, well within current market values and could be a source of funds of \$540,000. In 2017, 3,794,643 warrants with an average exercise price of \$0.35 have been exercised for proceeds of \$1,332,668.

As described in the following Capital section, on Jan. 5, 2017, the Company closed a private placement and raised \$4,474,050.

The Company is in the advanced exploration stage at most of its properties and has been largely reliant on obtaining equity financing in order to continue its longer term exploration and development activities, and on its working capital for its short and medium term requirements. Management believes that a variety of funding alternatives is available and is now actively pursuing available alternatives.

Capital

For the period ended	June 30, 2017	December 31, 2016
Common Shares	114,859,216	93,757,740
Warrants	23,478,899	10,141,709
Stock options	8,805,000	6,030,000
Total	147,143,115	109,929,449

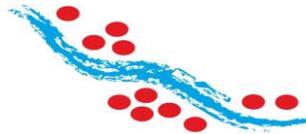

As described in Note 13 in the June 30, 2017, interim condensed consolidated financial statements, on January 5, 2017, the Company closed a non-brokered private placement issuing 14,913,500 units at a price of \$0.30 per unit, for aggregate gross proceeds of \$4,474,050 of which \$2,205,450 was received in advance and held by the trustee at December 31, 2016. Each unit consists of one common share in the capital of the Company and one share purchase warrant which entitles the holder to purchase one additional common share at \$0.45 for a period of 60 months.

In connection with the acquisition of the Hydro Resources Inc. described in Note 10 of the interim condensed consolidated financial statements, the company issued 2,218,333 common shares and warrants as a partial payment for the transaction. The common shares were valued at their fair market value of the issuance date. See Note 14 of the interim financial statements regarding the valuation of the warrants.

In connection with the term loan arranged with Extract, the Company issued 2.5 million shares which are subject to a 4-month hold period. The fair value of these shares is recorded in the unamortized transaction costs which will be amortized and charged to the statement of operations over the term of the loan.

On March 30, 2017, the Board of Directors granted a total of 2,950,000 stock options to officers, directors, employees and consultants. The stock options have a three-year term, vest 50% after the first six months and the remaining 50% after twelve months, and have an exercise price of \$0.60. The fair value assigned of \$917,071 was estimated using the Black-Scholes option pricing model with the following assumptions: share price \$0.58, dividend yield 0%, expected volatility based on historical volatility 84.73%, a risk free interest rate of 1%, and an expected maturity of 3 years. The fair value of the options will be recognized over the periods the underlying options vest.

On August 22, 2016, the Company granted a total of 2,540,000 options to officers, directors, employees and consultants to buy common shares at an exercise price of \$0.25 each. The fair value assigned was estimated using the Black-Scholes option pricing model with the following assumptions: share price \$0.24, dividend yield 0%, expected volatility based on historical volatility 82.230%, a risk free interest rate of 1.03%, and an expected maturity of 3 years. These options vested at a rate of 50% every six months after the date of grant

Laramide Resources Ltd.

and expire on August 22, 2019. As a result, the fair value of the options estimated at \$308,121 will be recognized over the periods the underlying options vest.

During the period, \$148,165 (2016 - \$43,002) of vesting option cost was capitalized to mineral properties and \$316,267 (2016 - \$119,500) was expensed to operations and deficit. The offsetting charge was allocated to contributed surplus for \$464,432 (2016 - \$162,502) in aggregate, pertaining to the recognition of the fair value of options vesting during the year.

The following is a summary of warrants outstanding at June 30, 2017.

Number of Warrants	Exercise Price (\$)	Expiry Date
300,000	\$0.80	December 23, 2017
2,574,200	\$0.50	December 24, 2017
2,272,866	\$0.45	March 13, 2018
1,200,000	\$0.35	December 16, 2021
14,913,500	\$0.45	January 5, 2022
2,218,333	\$0.45	January 5, 2022

OFF BALANCE SHEET TRANSACTIONS

In 2017 and 2016, there were no off-balance sheet transactions. The Company has not entered into any specialized financial agreements to minimize its investment risk, currency risk or commodity risk.

COMMITMENTS

In order to maintain current rights to tenure of exploration tenements, the Company will be required to expend amounts in respect of tenement rent to the relevant governing authorities and to meet certain annual exploration expenditure commitments. It is likely that variations to the terms of the current and future tenement holding, the granting of new tenements and changes at renewal or expiry, will change the expenditure commitments for the Company from time to time.

These outlays (exploration expenditure and rent) which arise in relation to granted tenements inclusive of tenement applications granted to December 31, 2016 but not recognized as liabilities are: \$1,608,545 for a period not longer than one year; (\$1,676,972 at December 31, 2016); \$4,657,229 for a period longer than one year but not longer than 5 years (\$4,535,285 at December 31, 2016) and \$nil more than five years. These commitments are detailed in Note 18 to the consolidated financial statements.

Annual property renewals for the U.S. properties are approximately US\$60,000 per year and must be filed by September 1 of each year.

The term loan with Extract provided Extract with a production fee of US\$0.50 per pound of U₃O₈ produced from any of the projects owned by Laramide. The production fee may be repurchased at any time by Laramide for a lump sum payment as described in Note 12 to the June 30, 2017 interim condensed Consolidated Financial Statements.

CONTINGENCIES

With respect to the Company's wholly owned Australian subsidiary, Tackle Resources Pty Ltd., no provision has been made for the possibility of native title claim applications at some future time, under the provisions of the Australian Native Title Act (1993), which may impact on exploration tenements under application. Any

Laramide Resources Ltd.

substantiated claim may have an effect on the value of the tenement application affected by the claim. The amount and likelihood of any such claim(s) in the future cannot be reasonably estimated at this time.

RELATED PARTY TRANSACTIONS

During the period \$20,226 (2016 - \$95,099) was charged for legal services and filing fees by a firm, in which an officer of the Company, Chris Irwin, is a partner. Included in accounts payable and accrued liabilities at June 30, 2017 there is \$22,855 (December 31, 2016 - \$61,247) of payables to the firm.

During the period, the Company charged \$194,386 (2016 - \$83,023) for office rent and other shared administrative expenses to Treasury Metals Inc., a company having a director, Marc Henderson, and an officer, Dennis Gibson, in common with Laramide. During the period, Treasury Metals also shared administrative expenses payments of \$8,797 on behalf of the Company. At June 30, 2017, there is \$13,608 of net accounts receivable (December 31, 2016 – net payable of \$23,341) from/to Treasury Metals Inc.

At June 30, 2017, there is \$50,000 and \$152,899 of a short-term loan and compensation, respectively, payable to Marc Henderson (December 31, 2016 - compensation payable of \$382,899). At June 30, 2017, there is \$91,000 of directors' fees payable (December 31, 2016 - \$197,000). Transactions with related parties were conducted on terms that approximate market value and measured at the exchange amounts.

In May 2017, at the annual and special meeting of the shareholders of Khan Resources Inc., Mr. Marc Henderson was re-elected as a Director of the Board of Khan, and was also appointed Interim CEO of Khan. Mr. Henderson is also a Director, President and CEO of Laramide Resources. Laramide does own an investment in Khan of 8.7 million shares which represents approximately 9.9 per cent of the outstanding shares with a current market value of approximately \$435,000. There have not been any other transactions between Khan and Laramide.

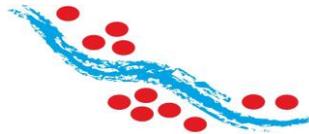

FINANCIAL INSTRUMENTS

The current bank accounts, accounts receivable and accounts payable are non-interest bearing. The majority of cash and cash equivalents are held in short-term investments bearing interest up to 1.25%.

The principal financial instruments affecting the Company's financial condition and results of operations is currently its cash, which it receives from interest and royalty payments, its investment portfolio and any financing transactions entered into by the Company. These sources of revenue are subject to various risks, including production risks with respect to the royalty payments and market risks with respect to the investment portfolio. The investment portfolio is managed by the Company. The long-term debt with Extract has a non-fixed interest rate of 12-month LIBOR plus 7.5% and the Promissory Note with Uranium Resources has an annual fixed interest rate of 5 per cent. The Company to date has not used any formal currency hedging contracts to manage currency risk.

RISKS AND UNCERTAINTIES

The Company's Risks and Uncertainties are disclosed in the Laramide March 29, 2016 Annual Information Form, which is filed on SEDAR and is herein incorporated by reference. These Risks are updated each quarter in the Management Discussion and Analysis when new events or changes in the jurisdictions where the Company operates necessitate new risk analysis. No new risks have been identified to date other than as disclosed in the Annual Information Form.

Laramide Resources Ltd.

OTHER INFORMATION

This discussion and analysis of the financial position and results of operation as at June 30, 2017 should be read in conjunction with the interim condensed consolidated financial statements for the Period ended June 30, 2017. Additional information can be accessed at the Company's website www.laramide.com or through the Company's public filings at www.sedar.com.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL INFORMATION

The Company's financial statements are the responsibility of the Company's management, and have been approved by the Board of Directors. The consolidated financial statements were prepared by the Company's management in accordance with International Financial Reporting Standards ("IFRS"). The consolidated financial statements include certain amounts based on the use of estimates and assumptions. Management has established these amounts in a reasonable manner, in order to ensure that the financial statements are presented fairly in all material respects.

DISCLOSURE CONTROLS AND PROCEDURES

Management has designed and evaluated the effectiveness of disclosure controls and procedures and the internal controls on financial reporting and have concluded that, based on our evaluation, they are sufficiently effective as of June 30, 2017 to provide reasonable assurance that material information relating to the Company and its consolidated subsidiaries is made known to management and disclosed in accordance with applicable securities regulations.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for certifying the design of the Company's internal control over financial reporting ("ICFR") as required by Multilateral Instrument 52-109 – "Certification of Disclosure in Issuers' Annual and Interim Filings" and CSA staff notice 52-316 – "Certification of Design of Internal Control over Financial Reporting". Our Internal Control over Financial Reporting is intended to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with applicable IFRS. Internal Control over Financial Reporting should include those policies and procedures that establish the following:

- maintenance of records in reasonable detail, that accurately and fairly reflect the transactions and dispositions of our assets;
- reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with applicable IFRS;
- receipts and expenditures are only being made in accordance with authorizations of management and the Board of Directors;
- reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the financial statements.

Because of its inherent limitations, Internal Control over Financial Reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management, including the Chief Executive Officer and Chief Financial Officer, has evaluated the design of the Company's internal controls over financial reporting as of June 30, 2017, pursuant to the requirements of

Laramide Resources Ltd.

Multilateral Instrument 52-109. The Company has designed appropriate internal controls over financial reporting for the nature and size of the Company's business, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS except as noted herein.

There have been no changes in Internal Control over Financial Reporting during the Period ended June 30, 2017 that have materially affected, or are reasonably likely to materially affect the Company's Internal Control over Financial Reporting.

Marc C. Henderson
President and Chief Executive Officer

QUALIFIED / COMPETENT PERSON STATEMENT

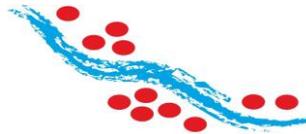

Information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves has been reviewed and approved by Mr. Bryn Jones, a Qualified Person under the definition established by National Instrument 43-101 and JORC. Under the guidelines of National Instrument 43-101, the Qualified Person for the Westmoreland Uranium Project is Mr. Bryn Jones, a Fellow of the Australasian Institute of Mining and Metallurgy. Mr. Jones is the Chief Operating Officer of the Company, and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Jones consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

The historical/foreign estimates were reported in the press release "Laramide to Acquire a Substantial Portfolio of ISR Projects" dated 10 November 2015. The Company is not in position of any new information or data relating to the historical/foreign estimates that materially impacts upon the reliability of the estimates or the Company's ability to verify the historical/foreign estimates as mineral resources in accordance with Appendix 5A (JORC Code). The Company confirms that the supporting information provided in the initial market announcement referred to in rule 5.12 continues to apply and has not materially changed.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING INFORMATION

This MD&A contains "forward-looking information" within the meaning of applicable Canadian securities legislation. Forward-looking information includes, but is not limited to, information with respect to Laramide's future exploration and drilling plans, environmental protection requirements, business plans and strategy. Generally, forward-looking information can be identified by the use of forward-looking terminology such as "plans", "expects", or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases or state that certain actions, events or results "may", "could", "would", "might", or "will be taken", "occur", or "be achieved".

Forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of the Company to be materially different from those expressed or implied by such forward-looking information, including risks associated with the exploration, development and mining industry such as economic factors as they affect exploration, future commodity prices, obtaining financing, market conditions, changes in interest rates, actual results of current exploration activities, government regulation, political or economic developments, environmental risks,

Laramide Resources Ltd.

insurance risks, capital expenditures, operating or technical difficulties in connection with development activities, personnel relations, the speculative nature of uranium exploration and development, including the risks of diminishing quantities of grades of reserves; contests over title to properties, and changes in project parameters as plans continue to be refined as well as those risk factors discussed or referred to in this MD&A and in Laramide's Annual Information Form.

Forward-looking information is based on the reasonable assumptions, estimates, analysis and opinions of management made in light of its experience and its perception of trends, current conditions and expected developments, as well as other factors that management believes to be relevant and reasonable in the circumstances at the date that such statements are made, but which may prove to be incorrect. Although the Company believes that the assumptions and expectations reflected in such forward-looking information are reasonable, undue reliance should not be placed on forward-looking information because the Company can give no assurance that such expectations will prove to be correct. In addition to other factors and assumptions that may be identified in this MD&A and in Laramide's Annual Information Form, assumptions have been made regarding, among other things: the Company's ability to carry on its exploration and development activities, the timely receipt of any required approvals, the price of uranium, the ability of the Company to obtain qualified personnel, equipment and services in a timely and cost-efficient manner, the ability of the Company to operate in a safe, efficient and effective manner, the ability of the Company to obtain financing on acceptable terms, the accuracy of the Company's resources estimates and geological, operational and price assumptions on which these are based and the regulatory framework regarding environmental matters. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions that may have been used.

Although Laramide has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information. Laramide does not undertake to update any forward-looking information, except in accordance with applicable securities laws.
